LaGard Keypad Tester

112853

To use the keypad tester, remove the keypad from the unit that it is attached to. Once it has been removed, strip the color-coded wires that are coming from the lock back to expose the cable inside. Now, attach the color-coded alligator clips to the matching color on the exposed wires.

Now that the keypad tester is attached, plug the other end that has the connector into a new keypad. Notice there is a white mark on the end of the connector. This is the index mark. It needs to be matched with the keeper side of the keypad plug (See Photo). Apply power to the keypad and enter the lock's combination. If the old keypad was malfunctioning, the lock should now open.

White Mark   Keeper
